Curriculum Overview

Overview
The Diploma of Advanced Studies (DAS) in Work+Health integrates Occupational Medicine (OM) and Occupational Hygiene (OH), as well as workplace ergonomics. The interdisciplinary DAS Work+Health program consists of common and specialized modules. DAS Work+Health students may select one of these disciplines based on their educational and professional background and personal interest. You have the privilege of taking two additional modules in the other discipline without additional costs.

Common modules (C1 to C10)
Topics and practical approaches for both disciplines are introduced in the common modules.
The DAS Work+Health program emphasizes interdisciplinary group work, discussion rounds, and case studies.

Specialised modules
The specializations of DAS Work+Health are:
- Occupational Medicine (OM1 to OM5)
- Occupational Hygiene (OH1 to OH5)
Besides lectures and group work, you will also visit work sites to practice your skills and enhance your knowledge.

Group project (C11)
In the last module, the group work of C11, you will work in an interdisciplinary group in industry. Here you will be able to demonstrate your ability to transform your newly acquired knowledge into practice.
